IB Computer Science Internal Assessment Feedback

School code [redacted]

Candidate number: [redacted]

Criterion	Mark	Explanation
A	5 / 6	The student identified the problem and proposed a web-based solution, with clear and precise success criteria in line with the client's needs. The criterion demonstrates remarkable client engagement and flexibility when modifying the project scope. However, further justification for PHP and consideration of security would further improve the planning
B	6 / 6	The record of tasks, the design overview and an outline of the test plan are detailed and complete. This information is clear and sufficiently demonstrates how the solution was developed.
C	10 / 12	The extensive and proficient use of MYSQL, PHP, and Flexible box layout (flexbox) techniques showcases a high level of complexity in addressing the scenario identified in criterion A. These techniques are sufficient for the task and their major uses were clearly explained.
D	4 / 4	The video shows that the product functions very well. Users can create accounts, sign in to their accounts and book for events. The calendar also shows upcoming events and the navigation works seamlessly. The video also shows how modifications were made during the development.
E	4 / 6	The product is fully evaluated against the success criteria identified in criterion A including feedback from the client/adviser. Recommendations for further improvement of the product are very realistic. .

Total	**29 / 34**

IB Computer Science Internal Assessment Feedback

School code: [redacted]

Candidate number: [redacted]

Criterion	Mark	Explanation
A	5 / 6	The problem is well-defined, with a clear client and rationale for the proposed solution. The justification for using JavaFX is reasonable, though a comparison with alternative solutions such as web-based tools could strengthen the rationale. The success criteria are detailed and precise, covering both functionality and usability. However, including measurable targets like how progress tracking will be gauged would further improve clarity. Overall, a strong section with minor refinements is needed for full marks.
B	6/ 6	The design documentation is well-structured and complete, covering key design aspects with a clear and systematic test plan. The use of different design tools such as Unified Modelling Language diagrams and flowcharts to implement the design showcases a strong software design skill. The logical organization of controllers and structured testing enhance clarity. Moreover, a clear test plan is included to demonstrate how the design would be tested against the success criteria.
C	11 / 12	The project is well-structured and technically demonstrates skillful implementation of a JavaFX-based application. The student has showcased strong object-oriented programming skills by utilizing encapsulation, inheritance, exception handling, and scene management techniques. The integration of SceneBuilder for UI design is commendable, as it streamlines the development process. The project functions as intended, handling user input efficiently and switching between sections seamlessly. Exception handling has been implemented, ensuring robustness. However, further explanation of design choices and additional inline documentation would further enhance readability and maintainability. Overall, this is a high-quality submission that displays the student's understanding of key Object-oriented programming concepts and JavaFX development.

D	3 / 4	The video successfully demonstrates the solution's functionality, usability, and navigation. The video provides clear evidence that the solution works as intended. However, to fully meet the expectations of Criterion D, there is a need to directly compare the solution to the success criteria, incorporate real user feedback, and discuss potential improvements in detail. A more structured assessment addressing these aspects would further improve this criterion.
E	5 / 6	The evaluation effectively appraises the success criteria, verifying that all have been met. The client feedback is pertinent and provides significant insights, but this could be improved by including a reflection on the outcome of the solution (e.g., efficiency gained, and student engagement). The recommendations are thoughtful, but discussing potential implementation challenges or prioritization would enhance depth. Strong evaluation overall, but slightly lacking in critical analysis of effectiveness.
